The Economics of Climate Change in Argentina

Series: The Latin American Studies Book Series

- Studies climate change impacts and mitigation policies from an Argentinian perspective
- Integrates rigorous economic analysis from academics with a policy perspective and actual practitioners in Argentina
- Aimed at a broad audience, ranging from academics, researchers and policy-makers

In this volume, the contributors discuss some of the most remarkable global warming effects in Argentina and examine policies that Latin American countries could follow to achieve their individual climate goals. Climate change is one of the most pressing issues today. However, after many years of climate negotiations, the world has failed to introduce a common global policy. Differences in countries' climate agendas have led to unsuccessful efforts. Countries willing to pursue a climate policy have sought alternative strategies to mitigate and adapt to global warming's consequences within their jurisdiction. In this context, Latin American countries' role in shaping the regional climate agenda is yet to be explored. The book covers some papers from the well-received "First Workshop on Environmental Economics and Energy" in Argentina. Using data from Argentina, the contributors analyze the effects of global warming on agricultural yields and the impact of extreme weather on human health. From a global perspective, the contributors also describe the interactions between a reduction in carbon emissions, carbon emissions intensity, and economic growth; the role that trade policies can play to reduce carbon emissions; and the paradoxes that arise from promoting renewable energies in the region. The contributors also address the relationship between sustainability and economic growth; the private sector's role in shaping policies and providing sustainable solutions; and the Latin American challenges for the next generation. The book will be of interest to policy-makers, academics, researchers, and professionals worldwide working in climate change impacts and policy.
